A study of buying behaviour of youth towards branded fashion apparels in Mawana city

Neelam Singh

Abstract
As in this competition era, from business point of view we must be aware about the customer needs & wants & what a consumer expects from a company. We should have this information or a customer database if we want to stay in the market and to develop a competitive edge in the market. After conducting this study we must be able to understand what customers want from a brand, why they switch to other brand, what are the factors which force them to purchase branded apparels. By analysing these company can formulate the strategies as per the customer needs & deliver them the products which consumer wants from the company, which will be profitable for the company. The relationship between consumers’ decision-making styles and their choice between branded and non-branded clothing is investigated using a sample of consumers of Mawana city only. The purpose of our research is to investigate youth in MAWANA city to examine if any factor dominates in their buying behaviour for apparel. In addition, consumer attributes (i.e., apparel involvement, brand consciousness, reference group, social class, and other factors) and personal characteristics were investigated separately and in relation to the purchase behaviour of youth.

Keywords: Fashion, customer, behaviour, brands, youth

Introduction
The apparel and clothing industry being positioned at first place and also the spending on apparel and clothing among the customers are getting increased day by day. It becomes imperative to study the changing behaviour of consumers. Over the past decade the fashion industry has gone through some major structural changes. The Indian customer has undergone a remarkable transformation. Just a decade or two ago, the Indian customer saved most of his income, purchased the bare necessities and rarely indulged himself. Today, armed with a higher income, credit cards, exposure to the shopping culture of the west and a desire to improve his standard of living, the Indian consumer is spending like never before. Organized retail with its variety of products and multitude of malls and supermarkets is fuelling their addiction. Most customers’ preferences change according to the change in fashion. The apparel fashion plays a paramount role in shaping apparel consumerism. As lifestyles change, fashion in India is becoming more diversified, as in the Western countries. Technology, ideas and lifestyles are moving concurrently and quickly. Companies and brands that offered monotonous products for years, have now multiplied their product ranges and new appealing styles, shapes and forms are being launched each season by them.

Statement of problem
The most important statement is to identify the need of customers, what kind of apparels they like to wear. As we know that market segmentation has become an important tool used by retailers and marketers for identifying target customers. Segmentation is the process of partitioning markets into segments of potential customers who have similar characteristics and who are likely to exhibit similar purchasing behaviour. Segmentation has become a major tool of companies for planning marketing strategies. Segmentation research has several objectives that include to analyse the markets, developing and capitalizing on a superior competitive position.
This research investigates

Those factors that affect customer perception in choosing the fashionable apparels. Cultural factors such as apparel involvement, media, and reference group influences, self-esteem, and social class. It also investigates demographics such as income and age.

Do cultural influences, how much money they earn, and their age make a difference in their apparel choices? Do they let their peers choose their clothes or do they make these choices on their own?

Review of literature

Fernandez, P. (2009) focuses on the impact of branding on youth in choice of clothing as it is hypothesized that they are brand conscious. He suggests that brand conscious is the right choice of clothing, which helps them to create an image and identity for themselves. Peer influence plays a crucial role in their choice of brands as it aids in their socialization process.

In addition, advertising is an important variable in conferring brand values and establishing an image for the brand. Celebrity endorsements have a huge impact on branded clothing too as they promote certain attributes like image, quality and status. The researcher recommends that to retain loyalty of youth, brand managers need to build an emotional attachment to make the brand special and bring lasting loyalty of youth, brand managers need to build an image for the brand.

Fernandez, P. (2009) focuses on the impact of branding on youth in choice of clothing as it is hypothesized that they are brand conscious. He suggests that brand conscious is the right choice of clothing, which helps them to create an image and identity for themselves. Peer influence plays a crucial role in their choice of brands as it aids in their socialization process.

In addition, advertising is an important variable in conferring brand values and establishing an image for the brand. Celebrity endorsements have a huge impact on branded clothing too as they promote certain attributes like image, quality and status. The researcher recommends that to retain loyalty of youth, brand managers need to build an emotional attachment to make the brand special and bring lasting competitive advantage. Additionally, advertising should be used to not only create awareness but influence brand image and preference.

Khare, A. (2010) [7], suggested that in developing countries, consumers are becoming conscious of fashion brands. He was directed towards understanding the determinants of fashion clothing involvement of Indian youth. He researched on Youths of Indian colleges to understand the importance of fashion apparel in their lives. The results show that Indian youth is involved with branded fashion wear. There was not much significant difference in the involvement of females and males towards fashion clothing.

Verma, A.P. and Tiwari, K (2010) [9] covered the medium to high potential consumers that international and national brands can target in the Indian context. This study measures the segment values of some brands those have achieve success in the Indian market. Study shows that people are becoming mere brand conscious with the increase in income level. Brands and individuals would do well to understand the finer aspects of the scenario, and venture out to capitalize on the opportunities.

Yin, H.S. and Susan, S. (2012) this study examine the purchase preferences towards foreign and domestic branded apparels. It was found that preferences towards foreign branded apparels are related to the level of purchasing power and is not related to the demographics variables. 58% of the students surveyed preferred foreign branded apparel. There is a positive relationship between media influence and preferences towards foreign/domestic branded apparels. The more a person is exposed to the media, the stronger will be the influence of the media in “persuading” the individual to purchase the apparel. Mittal, P. and Agarwal, S. (2012) [4] in this study one can understand that the consumer and his behaviour is the cornerstone of success in marketing. It includes all the physical, mental and emotional processes and concerned behaviour which are observable before, during and after each and every purchase of goods and services. This make us compelling to understand, observe, record and react to such behaviour, in case we want to have win-win strategy that matter for marketer and the customer both. The research report presented is based on the Consumer Perception towards Branded Garments. Through this study an attempt has been made to practically understand those emotional or rational appeals, which drive the purchase decision toward the branded garments. Also certain demographic and psychographic profiles have been studied and certain relation has been developed.

Objective of the Study

Objectives of this research study are:

- To study & analyse the brand preference of youth in buying branded apparel in MAWANA city.
- To study the factors which influence the buying behaviour of youth for branded apparel
- To study the impact of branded apparel on the youth

Research Methodology

Data Sources

In dealing with any real life problem, it is often found that data at hand are inadequate, and hence, it becomes necessary to collect data that are appropriate. We have chosen following methods:

a) Primary data: These are those data, which are collected fresh and for the first time, and thus happen to be original in character. We have used the structured questioners.

b) Secondary data: These are those which have already been collected by someone else and which have already been passed through the statistical process. We collect the data from the sources like internet, published data etc.

Population of the study

This Study was conducted at the MAWANA city, U.P, INDIA.

Sampling Size

It is the total number of respondents targeted for collecting the data for the research. Sample size of 200 respondents have taken for research.

Sampling Technique

Random sampling technique is used in this research paper. We entered the daily data into MS-Excel sheets. After the exhaustion of the specified geographical area, this data has analysed using the different inbuilt formulae of Microsoft excel this will also help us in making the simple graphical and tabulation techniques. This data will help us in analysing the outcome of the research.
Tools used for research

As the research is exploratory so the tool used for analysing the data that can be collected from questionnaires is Factor Analysis and other primary tools needed for questionnaire design and data collection. We use factor analysis to check the impact of different factors of customers that leads to buy a brand. Factor analysis attempts to represent the correlations between variables as closely as possible with the fewest number of factors.

Analysis

Factor 1 includes four variables
- Do you think that when new styles of apparel appear on the market, you are the one who first buy them?
- Do you wear Brand clothes to impress people?
- Would you buy branded apparel in place of non-branded apparel regardless of the high prices?
- Do you buy branded apparels only because you want to look more attractive?

Factor 1 can be renamed as BRAND CONCIOUS.

Responses of Brand Conscious Factor:

Graphical Representation

Analysis: Most of the people have shown their consent that they usually wear or are neutral regarding the wearing of branded clothes to impress people. 65% people are saying that they usually prefer or are neutral towards the price of branded clothes i.e high price is not an issue for them. Most of the people show their consent that they wear branded clothes to look attractive.

It can be revealed that people wear branded clothes to look attractive and to impress people. Price of branded clothes is not a big issue for peoples. People prefer branded clothes over non-branded regardless of high price.

Factor 2 includes 5 variables
- Do you buy well-known branded clothes only
- Do you feel different when you wear different clothes?
- How much knowledge do you have about the International /National Brands of Apparels?
- Do you buy branded clothes only because you get value for the money you spend?
- Do you purchase clothes because you get bored with wearing the same type of clothes all the time?

The factor can be named as Value and Quality Seekers.

Analysis: Factor shows that people get influenced by new fashion but not always. They get influenced in the range of neutral to usually. Most of the people usually get influenced by friends and family. From this factor we conclude that fashion, family and friends influence the choice of brand.
Discussion & Conclusion

This study contributes to academia by providing the conceptual framework to understand apparel buying behaviour of young Indian consumers. Practitioners may also utilize this model in the present study to improve their retailing strategies to increase their retail sales by offering their well-maintained retail services, facilities, promotions and quality merchandise.

- People wear branded clothes to look attractive and to impress people.
- Price of branded clothes is not a big issue for people. People prefer branded clothes over non-branded regardless of high price.
- People buy branded clothes because they provide more value for money and because of their good quality.
- Wearing the same type of clothes makes people bored. They like to wear new and fashionable clothes.
- People wear branded clothes because of comfort and recognition that they give.
- Promotion of the brand by a well-known personality hardly affects the decision.
- People are less loyal towards the branded clothes.
- People get influenced by price offers, design and style of products to change the brand.
- Fashion, family and friends influence the choice of brand.
